

ARTES Valve & Service GmbH - new member of the ARCA Flow Group

The ARCA Flow Group is expanding and welcomes a new member, the ARTES Valve & Service GmbH in Berlin/Germany. ARTES produces control valves, particularly for power plants and refineries, and offers services for valves of all leading producers. Ball valves, desuperheaters, differential pressure transmitters and steam conditioning valves are part of the production program and are developed by highly qualified engineers.

Temperature control for steam and hot gases make exceptionally high demands on the quality of the atomisation and the regulating functions of the injection system. The ARTES desuperheater is a high-tech solution that fully meets the high demands of today's plants on the control performance. There is no risk of thermoshock damage to the pressurised pipes.

The necessary certificates like DIN EN 9001- 2000, pressure equipment directive and HPO admission are also available through an umbrella certification of the mother company ARCA Regler GmbH. The maintenance and repair of the valves on-site through the ARTES service department is made by transportable machine technique that guarantees highest reliability.

The production program of the ARCA Flow Group, increased by the products of the ARTES Valve & Service GmbH, offers now an even more comprehensive range of high-quality control valves. Besides pumps and cryogenics, manufactured by the FELUWA Pumpen GmbH and the WEKA AG, are also part of the group's production program. For more information on the ARTES Valve & Service GmbH please ask on phone +49-30-91204710 or see www.artes-valve.com.
